ecocoat WINDOW

Ultimate hydrophobicity for glass

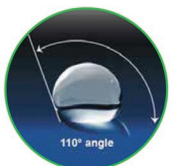

NANO TECH COATING

Designed to protect glass and acrylic surfaces. It is designed to offer the very best dirt and water repellency on treated surfaces leaving them cleaner for longer. Ecocoat Window works on a molecular level to seal the surface, creating an immense amount of surface tension so water beads up & rolls off.

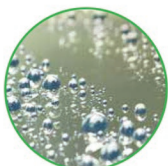

Ecocoat Window forms a strong chemical bond with the glass leaving an optically clear coating. Ecocoat Window repels water, oil and dirt at speeds as low as 50km/h, simply pushing the water off the windscreen, without the need for wipers. Ecocoat Window is extremely durable.

Ecocoat Window is the perfect balance of longevity and ease of use. It takes a short amount of time to apply and still provides an excellent hydrophobic effect. Ecocoat Window can also be applied to acrylic surfaces, such as motorcycle windscreens or Perspex, a transparent acrylic plastic. The effect is the same on these surfaces as it is on glass; water beads up and rolls off!

What's more, if you live in an area with harsh winters, Ecocoat Window will make windshields easier to clean as ice and snow won't stick!

CONTACT ANGLE OF 110°
